

Cut-flower seed and young plant suppliers' directory

Compiled by Gordon Hanks, Horticultural Consultant, for the National Cut Flower Centre
(Revised June 2015)

Please note: The emphasis in compiling this database has been solely to list businesses that might be of use in sourcing information, seeds, young plants, cuttings, liners, etc., for the trialling of cut-flowers, fillers, foliage, etc. Some of the companies listed supply a wide range of materials, while others specialise in a limited range, only some of which may be relevant to the cut-flower sector. Cut-flowers grown under heated glass in the UK (such as roses) and bulbous plants have not been specifically searched for, though some may have been incidentally included. The inclusion of a company or organisation does not imply an endorsement, nor does the omission of a company or organisation imply any criticism. The information is given in good faith and was understood to be accurate as of 17 June 2015. Comments given in the database represent the compiler's personal interpretation of the websites mentioned. The compiler does not claim this database is comprehensive in any way, and would be glad to receive constructive additions, alterations or corrections for inclusion at a later date via gordon.hanks@talktalk.net.

Aris Horticulture Inc (formerly **Yoder Brothers**) is a flower research, breeding and production company operating out of sites in Florida, Pennsylvania and Ontario. After acquiring **Green Leaf Enterprises** it organised to three business units.

Green Leaf Plants provides starter plants and un-rooted cuttings for perennials, azalea, tropical hibiscus, hydrangea, mandevilla, rose, exacum, gloxinia, lisianthus and penta. See the main entry for **Green Leaf Plants**

Keepsake Plants produces finished potted plants sold across North America, see: www.keepsakeplants.com

Aris Horticultural Services is the technical and sales arm.

In 1995 **Blooms of Bressingham** was set up as a new company in North America to introduce exclusive perennials from England. This has since expanded into a global activity with business partners in many countries. See their main entry.

Armada Young Plants encompasses the sales, propagation and breeding of aster, lavender, hibiscus, ranunculus, eupatorium, ajania, veronica, hypericum, lysimachia, phlox, asterini, pot carnation, solidago, delphinium, chelone, eryngium, rose hips and disbud, santini, pot, spray and pico 'mums. For specific contacts and agents see the main web site and: www.armadayoungplants.nl/pages/UKlinks/html

Armada International specialises in protection and licensing and offers this as a service. **Armada Breeding** can develop new varieties on an exclusive basis.

DecoNova specialises in the breeding, propagation and sales of cuttings of disbudded 'mum for natural season production, sells cuttings of spray 'mum and santini varieties for indoor and outdoor production.

Comments and further links

International Seeds Processing GmbH has a long history in the former GDR, and after 1989 was taken over by a Swiss company and reorganized. Quedlinburg is a renowned seed-breeding city, associated with large-scale seed companies breeding sugar beet, vegetables and flowers. The main focus of the Quedlinburg breeding range of flowers is antirrhinum, callistephus, dahlia, annual dianthus barbatus, ornamental herbs, primula, viola species and cuttings-raised plants generally.

Comments and further links

GJ van Zelderen BV is a producer and distributor of planting material to professional growers internationally, with a wide variety of cut-flower and pot-plant young plants, including asparagus, aralia, *Radermachera sincica*, *Schefflera arboricola*, *Nolina recurvata* and others. Their range of green fillers has given them a foothold in the bouquet market.

Research led to the company unveiling its first curcuma and globba varieties, which have proved successful in cut-flower production as well as for pot-plants. They also specialise in indoor and outdoor palms, and indoor green plants for pot-plant and cut leaves.
